Dear Sir:

Our class is making a presentation on "Pollution on Ontario Waterways." We are researching how pollution is affecting sport fish in our rivers. My group suggested I write to your department and ask you to send us some pamphlets and posters that we might use in our project.

As part of this information, we would like to know the areas of worst pollution. What is the government doing to solve these pollution problems? We want to make sure that Ontario's rivers are clean and safe for our generation and the next.

Yours Sincerely,

Shaheem Javied
